13th June 2018

For more details Contact : 8074680798, 9014536789

Eligibility: Any Degree 2018 Pass Outs

Location of Job: Hyderabad

Profile: Network Operations Center

NOC (Network Operation Center) is the central command and control center for 'Transportation Execution' across the Amazon Supply Chain network. It ensures hassle free, timely pick-up and delivery of freight from vendors to Amazon fulfillment centers (FC) and from Amazon FCs to carrier hubs. In case of any exceptions, NOC steps in to resolve the issue and keeps all the stakeholders informed on the proceedings. Along with this NOC keeps on looking for process improvement space in FC operations. TRON team is one such initiative which remotely handles exception in the AR site in North America fulfillment Centers.

The TRON system is a technology which enables the human supervisory control of automated tasks. In the TRON system, a remote associate provides supervisory control when automated tasks fail for any reason. This allows us to avoid falling into the 90/10 trap where a task can be 90% automated but requires 90% of the time for the last 10% of functionality. Our strategy is to employ a human-as-sensor model and allow humans to perform just those portions of a task that require higher order cognitive ability.
